

Making Paperless Possible

eContract Signer

for Legal Contracts and Agreements

Sign. Secure. Store. Entirely Electronically.

With a secured asset attached to every contract, your company depends on their ability to prove that the contracts have been signed, secured and stored, in unalterable, tamperproof form. Since the legal enforceability of these contracts is governed by federal, state and local laws and regulations, the process for securing these contracts is paramount. Orion holds the only secure PKI-based software patent combining data with electronic signatures, fingerprints, and other biometrics that is central to the security of electronic documentation signing. Using our patented technology, you can create auditable and enforceable electronic documents, and demonstrate compliance with the applicable laws and regulations. eContract Signer was designed specifically for contractually dependent industries - to eliminate the inefficiencies inherent in paper, increase productivity and keep your resources focused where they should be – on your business!

This should be the only paper in your office!

Who we are

Orion is a leading provider of document imaging and electronic document solutions. Since our founding in 1991, Orion has been providing leading edge solutions to contractual industries and government entities seeking to eliminate inefficiencies, cut costs and increase productivity through paper reduction and elimination. We have created a broad range of solutions targeting key industry needs: security, compliance and ease of use.

Who uses eContract Signer

Each day, millions of transactions are signed and secured using Orion's eContract Signer. Our customers use their existing legally enforceable contracts, processes and standards, in combination with our patented software, to meet or exceed the legal compliances the industry requires, (as set forth in the UCC, UETA, E-Sign and other electronic document regulations.) And, since the electronic original is created by Orion, a disinterested third party, no one in your organization has direct access to the information and/or biometric, preventing security leaks that might otherwise occur. This also ensures that you are in compliance with new and more stringent personal data protection regulations, including PIPEDA, National ID Theft Prevention Act, and more.

Since its inception, Orion has been pioneering paperless initiatives for companies seeking to secure electronic documents. Our definitive PKI based software patent is central to the security of all types of electronic documentation signing.

Paperless Implementations:

- Car / Truck Rentals
- Equipment Rentals
- Leases
- Mortgages
- Revolving Credit
- Inspections
- Condition Reports
- Wills/Legal Documents
- Appraisals

And all types of other legal agreements.

Making Paperless Possible.

eContract Signer

for Legal Contracts and Agreements

Broad Platform Support.

As a seventh generation product, eContract Signer has evolved as the solution of choice for securing electronic contracts in a broad range of operating environments. Our patented solution supports a wide variety of Microsoft, Linux, UNIX, and proprietary platforms. Our web browser offerings are truly thin-client! No software is installed or resident on the client, greatly improving ease of management, deployment, servicing, and upgrades.

Plug and Play Capability.

A myriad of transaction devices, credit card readers, fingerprint devices and more are available today. Programming your existing environment to support a single device is a time consuming effort that must be repeated to change or replace devices, leaving you dependent upon the strategies and life cycles of the hardware vendor. By using Orion's consistent, plug and play eContract solution, your programming investment is protected.

How do I get started?

eContract Signer is easily and seamlessly integrated into your existing IT and business process. It supports your existing (and legally enforceable) forms and business processes. Electronic contracts are created using the processes you use today, and are permanently stored in your existing corporate database. Because it is an "electronic original", the look and feel of the contract is permanently maintained. In addition, creation information, ownership history and reviews are all detailed through customized audit trails. Your processes don't change through paper elimination – only your costs do – *down!*

Call us today and learn how you can maintain legal enforceability, regulatory compliance AND be entirely electronic!

Technical Information in Brief:

Platforms:

Java, Web, Browser, JPOS, J2EE
.Net
Windows (2000/2003)
Linux
UNIX (multiple)
C, C++, VB, COBOL

Application Servers:

IBM WebSphere
JBOSS
Apache Tomcat
BEA

Encryption Standard Support:

PKI

Signature/Transaction Device Plug and Play Support:

HHP
Hypercom
Ingenico
Interlink Electronics
Symbol Technologies
Topaz
...And others, call for details...
